Professional Summary

Cloud engineer who built, secured, and operated production Azure infrastructure for a SOC 2–audited fintech platform, and spent 12 months building LLM and RAG applications on AWS. M.S. in Cybersecurity; Security+ certified.

Experience

Cloud Engineer June 2025 – April 2026
FinLocker (fintech SaaS platform) *St. Louis, MO*

- Captured dev, stage, and prod Azure environments in Terraform state and deployed all dev infrastructure solo in ~1 month, using Microsoft Copilot and MCP to map an undocumented estate
- Migrated live data pipelines from Synapse to Microsoft Fabric as sole architect; rewrote Python staging writes as set-based SQL, cutting capacity from F16 to F8 (~$1,050/month saved)
- Built a metadata-driven pipeline that ingests 20K+ Avro files a day into 22 SQL tables, with deduplication, retry, archive, and quarantine paths
- Released Azure DevOps pipelines to stage and prod as one of two authorized engineers and upgraded ~100-node AKS clusters in change windows with no notable downtime
- Closed public access with Private Endpoints, built new services on managed identities, and split one shared Key Vault into 100+ vaults scoped by service and environment
- Contained a phishing compromise of 3 accounts within 1 hour by resetting passwords, revoking sessions, and reimaging devices, with no data exposed

AI Security Engineer (Contractor) Jan 2026 – April 2026
Kennesaw State University *Remote*

- Deployed and supported a GenAI defense advisor (self-hosted Mistral LLM, Pinecone RAG, Docker on AWS EKS) used live by students from 15 universities against professional red teamers

Journeyman Operations Research Analyst (AI Security Engineering) May 2025 – Dec 2025
University of Missouri-St. Louis *St. Louis, MO*

- Owned LLM selection and tool-use architecture for an AI security agent, built a RAG pipeline over ~255K words of NIST and CIS guidance, and demoed it to Booz Allen Hamilton and DoD

Projects

jinbai.dev | *React, GitHub Actions, AWS (S3, CloudFront, Route 53)* 2026

- Built this portfolio with a GitHub Actions pipeline that deploys each push to a private S3 bucket behind CloudFront, with Route 53 DNS and HTTPS

arrange.ly | *Python, Flask REST API, sentence embeddings, spectral clustering* 2026

- Rebuilt my 2nd-place e{hack}2024 project as a tested REST API that clusters guests into seating plans under capacity limits

Publication

N. Gurkan and **J. Bai**, "Neural Thurstone Model: Leveraging Latent Spaces for Collective Intelligence in Ranking Predictions," *Proc. Annual Meeting of the Cognitive Science Society*, vol. 47, 2025.

Technical Skills

Cloud: Azure (AKS, Front Door, Key Vault, Monitor, Fabric, Synapse), AWS (EKS, S3, CloudFront, Route 53)
IaC & DevOps: Terraform, Azure DevOps, GitHub Actions, CI/CD, Kubernetes, Docker, Git
Security & Identity: Entra ID, managed identities, Defender for Endpoint, Intune, TLS/PKI, incident response, SOC 2
Languages & AI: Python, PySpark, SQL, KQL, PowerShell, Bash, LLMs, RAG, MCP

Education & Certifications

M.S. Cybersecurity – Information Systems / Technology, University of Missouri-St. Louis May 2025
B.S. Chemistry, University of Missouri Dec 2018
Full-Stack Development Bootcamp, LaunchCode Expected April 2027
CompTIA Security+ (2026–2029) · **AWS Certified Cloud Practitioner** (2024–2027)
