Professional Summary

Cloud and security engineer who ran Azure infrastructure, security, and IT for a SOC 2–audited fintech SaaS platform: AKS, Terraform, identity, endpoints, and incident response, backed by an M.S. in Cybersecurity and AI security research.

Experience

Cloud Engineer June 2025 – April 2026
FinLocker *St. Louis, MO*

- Built Terraform IaC to replicate the SaaS platform into a new Azure tenant for a perpetual-license client offering, solely redeploying the full dev infrastructure in ∼1 month with Microsoft Copilot and the Microsoft MCP server
- Architected the migration from Azure Synapse to Microsoft Fabric as sole architect, configuring secure endpoints and benchmarking compute tiers to right-size capacity for ∼20K records/day
- Hardened the platform with Private Endpoints on every connected resource, managed identities for new services, and secrets split from a few shared Key Vaults into 100+ scoped vaults
- Upgraded dev and stage AKS clusters (∼100 nodes each) in after-hours change windows with no notable downtime, and migrated 50+ VMs from retired agents to Azure Monitor Agent
- Contained a phishing compromise of 3 accounts, including the CEO's, within 1 hour with no data exposure; investigated a Defender data-exfiltration alert and filed a formal report
- Supported 40–50 employees across Entra ID, Active Directory, Microsoft 365, and Barracuda VPN, imaging ∼10 laptops and 2 Mac minis and handling onboarding and offboarding
- Enforced Intune compliance for ∼50 devices and wrote remediation scripts that silently install and update software, rolling out Claude CLI to non-developers
- Automated a daily executive report with Logic Apps and SQL, replacing the CTO's 15-minute manual script
- Supported a successful SOC 2 audit; drove an AI vendor project documenting 100+ repositories for the first time

AI & Cybersecurity Researcher – ADAM Team May 2025 – April 2026
Kennesaw State University; University of Missouri - St. Louis *Kennesaw, GA / St. Louis, MO*

- Built a blue-team AI advisor (self-hosted Mistral LLM, Pinecone RAG) on AWS EKS for students from 15 universities facing professional red teamers; teams held out 3–7.8 hours of an 8-hour event
- Owned LLM selection and tool-use architecture; built guardrails blocking destructive commands like `rm -rf` and a real-time editor for agent-suggested commands
- Demoed the platform to Booz Allen Hamilton and DoD stakeholders, helping secure 4 additional months of funding

Certifications

CompTIA Security+ (2026–2029) · **AWS Certified Cloud Practitioner** (2024–2027)

Technical Skills

Cloud: Azure (AKS, VMs, Front Door, Key Vault, Monitor, Logic Apps, Fabric, Synapse), AWS (EKS)
IaC & DevOps: Terraform, Azure DevOps, Git, Docker, Kubernetes, change management
Security & IT: Defender for Endpoint, Entra ID, Active Directory, Intune, RBAC, Barracuda WAF/VPN, SOC 2
Languages: Python, PowerShell, Bash, SQL, KQL, HCL, JavaScript, HTML/CSS
AI: Microsoft Copilot, MCP, LLMs, RAG, Pinecone

Education

M.S. Cybersecurity – Information Systems / Technology, University of Missouri – St. Louis May 2025
B.S. Chemistry, University of Missouri Dec 2018
Full-Stack Development Bootcamp, LaunchCode Expected April 2027
